PreventIV Measures™ @ work

The benefits of flexibility

Flexibility is essential in today's fast-paced pharmacies. When you need a standard dose, a prefilled syringe saves you a step, and skipping a step both saves time and can contribute to accurate dosing. But when the patient needs a nonstandard dose, a vial is needed. SAGENT is offering you flexibility by providing PALONOSETRON HCl Injection in both a prefilled syringe and a vial.

And because these are SAGENT products, they also provide the benefits of **PreventIV Measures** Packaging and Labeling, to help you select the correct medication each and every time. Full-color labels and cartons have a unique design to help them stand out on the shelf, and the drug name and strength are prominent and easy to read.

That's **PreventIV Measures** Packaging and Labeling at work for you.

See the Difference

What kind of chocolate do you need right now? Chips to make cookies? Powder to make hot cocoa? Syrup for chocolate milk? If all these are in your pantry, you don't have to run out to the store, and the kids won't be complaining. Saves time and lets you do what you need to do efficiently!

It all adds up

Listening. Responding. Delivering. That's Injectables Excellence.™ That's SAGENT Pharmaceuticals.®
